

States of Matter - Particle Evidence Table

Use the same substance for all three simulation observations. Type in the fields or print and write clearly.

Student name:

Date:

Example answer (not one of your three rows):

Plasma | very far apart | no fixed arrangement | extremely fast-moving charged particles

State	Particle spacing	Particle arrangement	Particle motion
Solid			
Liquid			
Gas			

Written explanations - answer in your notebook after completing this table:

1. What changed at the particle level as temperature increased?
2. What stayed the same throughout the simulation?
3. Why does a gas fill its container while a solid keeps its own shape?

Submit: this completed table plus your three numbered notebook explanations in U1 L4 Notebook Evidence Submission.
Save the typed PDF, or upload a clear photo/scan if you printed it. Make sure your name and U1 L4 are visible.
