

Checkpoint - Evidence-Based Change Classification

Complete every table row and both written justifications, then submit this PDF.

Student name:

Date:

For each observation, type Physical or Chemical and state the best evidence.

Observation	Classification	Best evidence
1. An ice cube melts into liquid water.		
2. A strip of copper is bent into a new shape.		
3. Two clear solutions form an insoluble white solid.		
4. Iron outdoors forms a reddish-brown substance.		
5. Liquid water boils on a hot plate.		
6. An activated glow stick produces light by reaction.		

PHYSICAL-CHANGE JUSTIFICATION

Choose one physical change. In 2-3 complete sentences, explain why substance identity stayed the same.

CHEMICAL-CHANGE JUSTIFICATION

Choose one chemical change. In 2-3 complete sentences, explain the evidence for a new substance.

CHECK AND CORRECT BEFORE SUBMITTING

1. Confirm all six observations are classified.
2. Confirm every row states evidence.
3. Confirm both justifications contain 2-3 complete sentences.
4. Remember: bubbles from boiling do not automatically prove a chemical reaction.
5. Record any correction below; do not erase the original response.

Submit this completed PDF in U1 L5 Checkpoint Submission.
