

Checkpoint Answer Sheet

Name: _____ Date: _____

Complete independently. Show all work.

1. Calculate the molar mass of $\text{Al}_2(\text{SO}_4)_3$. Use Al = 26.98, S = 32.06, O = 16.00.
2. A sample contains 17.1 g $\text{Al}_2(\text{SO}_4)_3$. Calculate the amount in moles.
3. Convert your answer from Question 2 to formula units.
4. State the representative particle for $\text{Al}_2(\text{SO}_4)_3$ and explain why it is not called a molecule.
5. Explain why 1 mol/342.14 g and 342.14 g/1 mol are both valid conversion factors but serve different purposes.

Final check

I checked units, scientific notation, significant figures, and reasonableness: Yes / Not yet
