

CHEMISTRY | UNIT 03 | LESSON 04

Metallic Bonding and Material Properties

Checkpoint Answer Sheet

Name: _____ Date: _____

MLA standards: MLA.CHEM.BON.01

Complete independently to show mastery of the metallic-bonding model.

1. Draw and label a metallic lattice. Include positive metal ions, delocalized electrons, and arrows showing electron motion.

2. Explain electrical conductivity using electron motion.

3. Explain malleability using sliding ion layers and continued attraction.

4. CER: Why can a metal remain bonded while its shape changes? Use model evidence.

5. Compare one metallic solid with one ionic solid.
