

CHEMISTRY | UNIT 03 | LESSON 08

Water, Solutions, and Concentration Reasoning

Independent Application Answer Sheet

Name: _____ Date: _____

MLA standards: MLA.CHEM.GAS.02 and MLA.CHEM.LAB.03

Follow the exact PhET Concentration steps in Moodle. Keep the solute identity constant and change only one variable at a time.

Condition	Solute / amount	Volume	Concentration	What changed?
Baseline				
Add solute				
Add water				
Evaporate water				

Calculation and comparison

1. Choose one trial and calculate concentration = solute amount / solution volume. Show substitution, division, and units.

2. Compare the add-water and evaporate-water trials. Explain the concentration change.

3. Explain why changing only one variable makes the comparison valid.
